

Team 1 Scrum Report 2

Project: **BPDA | Brazilian Community Census Analysis**

Members: **Simon Lu, Angela Tran, Andrew Tuckman, Carter Vande Moore**

Tasks Completed this Week:

- We held a check-in to see how our personal progress was going on finding census data and noticed we were all running into the issue of a general lack of available data on what we needed (explained more in issues)
- We attended our team meeting with the other census data team and found this was a common issue among all the years asked for in our project, from 1970-2020.
- We met with our client to address the issue, who brought in another person that had data for us. Additionally, we briefly discussed what methods we can use for visualizing the data, including Tableau and Arcgis.

Plans for Next Week:

- We plan to parse through the new data, and perform a preliminary analysis on the data.
- As last week, Simon will look at 1970 data, Angela will take on 1980, and Carter and Andrew will do 1990.
- We will attempt to answer one or two key questions, possibly on age or gender since we have an idea of what the trends will be.
- We will revisit the possibility of revising the scope of the project with this new data, or if it is sufficient enough to keep the current scope

Issues:

- Like stated above, we originally could not find data specific enough to fit the scope of the project. We were able to find data for the USA but not Boston or MA specifically. Either that or we were able to find census data on the Hispanic population but not the Brazilian community specifically. Additionally, data that we could find only gave information on population number, not any other feature.
- We discuss this in our Project Deliverable 1. However, with the new data given to us today, 10/22, at our client meeting, hopefully we will be able to achieve the requested scope.

Client Meetings:

- Last Client Meeting: Friday, October 22, 9AM
- Next Client Meeting: Friday, November 5, 9 AM
