

## **Team 1 SCRUM 3&4**

**Project: BPDA | Brazilian Community Census Analysis**

**Members: Carter Vande Moore, Simon Lu, Angela Tran, Andrew Tuckman**

### **Task completed this week:**

Last week (the week for Scrum 3), we were still not able to do anything because we didn't have our data yet. Last Friday, we got the data from our clients and a new scope for our project. The project is now going to be over the years 2005-2019 for all of the census team (2005-2011 for Team 1) and we will be providing visuals for the Brazilian population in Massachusetts (as opposed to before when it was for solely Boston). We will produce code that our client's will be able to reuse later in order to recreate the visuals for other states. This week, we provided graphs to visualize trends for the population, gender, and age of the Brazilian population over these years. We also clarified with Team 2 any minor miscommunications that we had between our teams (ie. how data would be displayed).

### **Plan for next week:**

This weekend, we will continue graphing the rest of the features (marital status, employment type, etc) for our years. We will also finish preparing our presentation for Monday, and then editing it during the week to account for any additional data analysis that we are able to finish during the week.

### **Client meeting recently:**

The last client meeting on 11/5 was when we were told about the new scope of the project and given our data. We did not meet with clients this morning, but we did meet with Hong and Team 2 in order to do a runthrough and get feedback on our projects.

### **Next Client meeting:**

Next client meeting will be on Friday 11/19 at 9am and will be Team 1 and Team 2's presentations.
